

Design a bot to open a Microsoft excel sheet and read data into data table.

- (i) Create a sequence and drop "Excel Application Scope" from activities - this will provide excel file location.
- (ii) Go to properties and in output create a variable.
- (11) Drop "Read Range" and then for each row from activities.
- (10) For each row in variable.
- (9) Use assign activity to assign row header to a new variable -

Output

[8] Read from Excel

[8] Excel Application Scope

"C:\Users\vanike\OneDrive\OfficeMobile\Documents\Book1.xlsx"

[8] Do

[8] Read Range

"Sheet1"

[8] For Each Row

ForEach row in output

Body

[8] Body

[8] Assign

a

= row["rollno"].toString

[8] Message Box
